France

RSI is a company delivering services for industries. The services cover quality inspections, sorting, retouch and assembly of products and technical expertness (Quality and Engineering centre).

► Presentation

Location

The RSI teams are working in the West of France and are located in different production plants and logistic warehouses (Visteon La Touche Tizon, Faurecia Bains sur Oust and Crévin, Société des polymères La barre Thomas, Legris, Gefco...).

History

In 2004, RSI was set up.

In 2006, the Company was taken over by Laura Inisan and Philippe Rozé.

Laura INISAN is an associate of RSI since its beginning; she has developed RSI within the automotive equipment suppliers of PSA near Rennes.

Philippe ROZE is a graduate of the school « Arts et Métiers », with 10 years of quality experience in industry.

2007 : ISO 9001 issue 2000

► Our profession

Quality inspection

We are performing quality inspections either visually or with matrix or with equipment provided by our customer.

Our work aims at checking your parts when a quality incident is declared in your plant or in your customer's plant. You or your supplier asked RSI to sort out the entire production until the corrective actions are efficient.

Within one hour after your order, a RSI team manager will arrive in the plant and organise the sorting in accordance with the check list and/or to a standard part.

Following your order, we start checking the customer delivery, the final product stock, and the production line stock. The RSI team manager takes into account the production needs and informs you regularly about the sorting.

Assembly

In order to help you when you face a production peak, we will assemble your products, respecting your quality standard.

Retouch

We retouch your products respecting your technical specifications. For example: sandpapering, debarring metallic or plastic parts, tapping, etc.

Technical Expertness

We give you support in :

Supplier Quality: claims and analyse of the corrective actions of your suppliers.

Production Quality: inspection facility capability, detection of your non-conformities in production.

Customer Quality: Check of your products in your customer plants, relationship with your customer.

Engineering centre: drawings with PRO-E V2.0 and V3.0.

► Our Skills

Reactivity

Our commitment is to provide you with the required staff for the checking within the hour following your written order. Our teams are at your disposal 7days/week, 24h/24h.

Flexibility

RSI is able to meet various customer needs. Facing an urgent demand, we can organise teams in 3*8, even during the week-end, and come back to a smaller team when urgency has passed.

Expertise and professionalism

Our staff is trained to the security, logistic and traceability rules in force in an industrial plant.

All our team members are autonomous. Furthermore, you will have one single contact person, who will be the team manager.

Finally, we will report to you on the number of checked parts, the number and the type of defects, the time of control and the traceability sheet.
